MY POTENSIAL

SELF-PERCEPTION AND PERCEPTION BY OTHERS

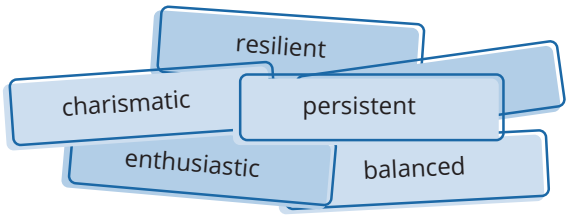

The potential analysis is about self-perception and perception by others.
The picture you have of yourself is sometimes different from the picture other people have of you. herefore, to find out what you are good at, other people must also give you feedback. This increases your knowledge about yourself. The potential analysis is exclusively about your strengths. Therefore, to find out what you are good at, other people must also give you feedback. This increases your knowledge about yourself. The potential analysis is exclusively about your strengths. Because only a positive self-perception contributes to more self-confidence.
With good self-confidence, the path of career orientation is easier to walk.

Self-assessment: My positive traits

Which positive traits describe me the most?

Step 1: Collect positive traits in the group and write them on small pieces of paper.To think of many traits, proceed alphabetically!

Here is an example:
A: balanced, persistent, ...
B: enthusiastic, resilient, ...
C: charismatic, ...

Step 2: Answer the following questions for yourself using the collected positive traits:

Enter as many traits as possible!

As a student, I am: _____

As a classmate, I am: _____

As a friend, I am: _____

As a daughter/son, I am: _____

As a sister/brother, I am: _____

As a grandchild, I am: _____

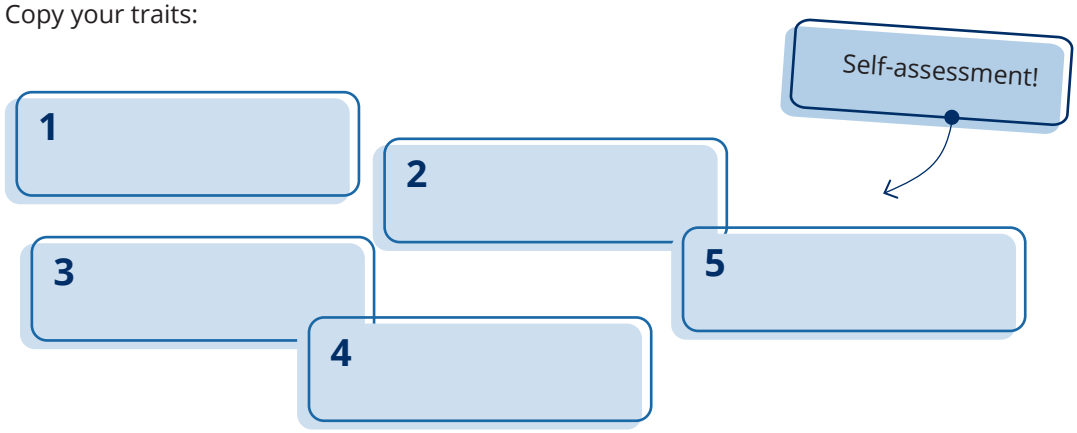

As a _____ , I am _____

As a _____ , I am _____

Step 3: Now choose 5 traits that you think describe you best. Look at which traits you wrote down more frequently (see above).

Copy your traits:

Step 4: Introduce to each other which traits you have chosen. Describe with examples why you chose these traits.

Example:
I'll chose **"persistent"** because I regularly show persistence during soccer training.
I'll chose **"balanced**" because nothing easily shakes my calm.

Assessment by others: Giving compliments

And what do the others think?
Which positive traits define me?

Step 1: Form small groups. Distribute all trait cards randomly within your group. Everyone gets the same number of randomly drawn traits.

Step 2: Now give your traits to the classmates whom you think they fit best. Explain why you decided that way. You will be surprised which cards you receive. And you will be surprised how your classmates react to the compliments.
