MY POTENSIAL

GETTING TO KNOW THE POTENTIAL ANALYSIS

During the potential analysis, you will solve several practical tasks.Staff members of an educational provider will observe you to see which strengths you use to solve the task.

They will observe the following potentials:

Personal Potentials

Motivation, willingness to perform:
Do you show interest in new tasks? Do you exert yourself?

Creativity:
Do you have your own ideas and come up with your own solutions?

Diligence / Carefulness:
Do you take time to solve tasks? And do you work precisely?

Patience:
Do you work calmly and composedly? And are you also patient with others? Can you also wait sometimes?

Methodical Potentials

Structured approach:
Do you approach tasks step by step and keep an overview?

Problem solving:
Can you master difficulties yourself and do you see problems coming early? Do you keep the goal of the tasks in mind?

Understanding of tasks and information processing:
Can you implement tasks without help? Do you take on tasks when working in a group? And do you then stick to the rules?

Social Potentials

Teamwork and cooperation:
Are you helpful and do you help others? Do you have your own opinion, but can also make compromises?

Mindfulness / Attentiveness:
Do you show consideration for your environment and yourself? Do you make sure that you and others are doing well?

Communication skills:
Do you communicate friendly with others and participate verbally in the tasks?

Practical Potentials

Manual dexterity / Hand-eye coordination:
Are you skillful in handling materials and tools?

Spatial awareness :
Can you estimate distances well? And can you read plans and make sketches?

Language proficiency:
Can you express yourself clearly and comprehensibly? Do you ask appropriate questions?

Action-oriented task: Paper airplane fleet

Step 1: Group division, preparing material and observation

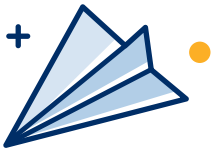

Divide into groups of 8 people each.
4 people will actively carry out the task, the other 4 will be silent observers and take notes.
You need: Work tables for 4 people, paper, scissors, and observer sheets (see below)

Observer sheet:
JEach observer monitors all 4 people in the group.
For this, you need a sheet of paper divided into 4 columns.
Enter the names of the active persons.

Gulshan	Fuad	Nubar	Rafael

And what is being observed?
Everything that the persons do well!

This can be:
Appearance / Demeanor: e.g., motivated, interested
Working method: e.g., prompt, tidy
Handling materials and tools: e.g., skillful
Interaction with team members: e.g., friendly, open, interested
Communication: e.g., asks a lot, is polite

Step 2: Instructions for the task

Your task is to fold a paper airplane fleet.
The fleet consists of:

- 1 x A4 airplane
- 4 x identical A5 airplanes

Use scrap paper! For the sake of the environment :)

The group whose paper airplanes make it the furthest wins.

You have **15 minutes** to agree on a design for your airplane
After that, you have **15 minutes** to build this plane 1x in A4 and 4x in A5.
The difficult part is: You are not allowed to test whether your design can actually fly!

After the time has expired, all groups fly their paper airplanes one after another. The group with the furthest plane wins!

Step 3: Reflection

Active group:

Discuss together in the team:

What did you do well?
What could have gone better?
Who took on which role in the team?
How did the other groups solve the task?

Observers:

Compare your observations.

What did you see similarly and what completely differently?
In your opinion, what are the strengths of the persons?
For this, compare the observations with the potentials (see the potential areas above)..

Step 4: Giving feedback

One observer each discusses the observations with one person from the active group.

Were you in the active group? Fill in:

This is what I did well: _____

_____

I was surprised that: _____

_____

This is what I learned about myself: _____

_____
